

Whom we do it for?

Custom Powders has been in the processing of powders and granules for over 25 years and provides its service to a very broad range of

customers within a lot of different industries. Addible products for human and animal for years now represent about 50% of our turnover. All these years we have rigorously worked at developing and improving our quality standards in close cooperation with our customers. By applying the HACCP control system we show that we are not tolerating any

risks and that we are committed to minimize possible risks by a good design of our process units, built in protection steps in the production process and by training our employees.

Over the years we have processed more than 400 different types of chemicals and polymers and have built up a wealth in experience and knowledge. Together with our customers who bring in their own specific product knowledge, we build on a solid partnership that is based on trust. Due to the wide variety of products we process for different types of industries, contamination risks is something that we are very aware off and pay a lot of attention to.

In order to minimize the risk on contamination and to ensure a safe and healthy work environment for our employees we exclude a number

of products with specific characteristics from our factory. In general we do not process any products with strong lingering odours, no pigments, no ST3 materials and no pharmaceutical active ingredients or highly toxic materials.

Custom Powders is committed to become the most important powder & granule processing

company in Europe with the broadest and most versatile range of processing facilities. We aim for the continuous improvement and extension of the range of our services and invest a lot of time, money and energy in order to achieve that. We distinguish ourselves in that we through the years have built up a wealth in experience with and knowledge of a very wide range of products and a broad range in processes. ON the basis of this experience we are capable of flexibly adapting our processes and to set up the equipment to specific customer needs/requirements. In close cooperation with our customers the process is set up in such a way that we can live up to the expectation to

Whom we do it for?

provide a high quality product, processed to the required specification at the best possible price. Most important however is that all of our employees are trained and intrinsically motivated to accept only the highest level of quality service.

Our references:

Custom Powders offers a broad range of processing facilities that are being used by a wide range of end-users. Here you find some examples of some applications for some satisfied customers in the chemical- as well as the food industry.

Food:

- Starch
- Sodium Bicarbonate
- Butter salt
- Proteins
- Acid Phosphates
- Instant Tea, Coffee
- Monosodium Glutamate
- Gum Acacia
- Toothpaste ingredients
- Milk powder
- Animal feed additives
- Flavours
- Chocolate
- Herbs & Spices
- Dextrose

- Zantham gum
- Fibres
- CMC
- Vitamins
- Sugars / Sweeteners
- Pharmaceutical Incipients

Chemicals en Polymers:

- Flame retardants
- Oil well drilling compounds
- Industrial water treatments
- Detergent ingredients
- Chemical intermediates
- Explosion suppressors
- Paint additives
- Anti-oxidants
- Specialty Polymers
- Specialty resins
- Plastic additives
- Glues
- Fungicides
- Cleaning detergents
- Ion exchange resins
- Wood treatments
- Veterinary formulations
- Rubber chemicals
- Non Iron catalysts
- Adhesives
- Animal feed supplements
- Household products
- Polymer rework
